

Plasma Update: Ordering multiple tests

We have released a new feature to allow you to combine multiple tests on one order so that they can be taken on the same blood sample.

How to order

This can be done from the 'Tests' or 'Patients' tab. Please use the "Test contents" section to add your chosen tests to the order:

**Tests
ordering**

Order test

Patient Add patient
AS (01/02/1985) x v

Test contents

Female Hormone Profile 3 | Blood | £107.90 x

Progesterone: Day 21 | Blood | £35.50 x

Add

Please note:

- Occasionally tests will be processed at different labs; these orders will be split into different kits as they will need to be returned separately.
- Multiple tests cannot be taken on a finger prick sample; they will default to the venous collection method.
- If you select two tests that cannot be taken together, such as mixed sample types or tests that are required to be taken on different menstrual cycle days, a pop-up message will be shown when you place the order:

Home / Tests / Ordering

**Tests
ordering**

Order test

Patient Add patient
AS (01/02/1985) x v

Test contents

Female Hormone Profile 3 | Blood | £107.90 x

Progesterone: Day 21 | Blood | £35.50 x

Advanced General Health Profile £180.90 x v

Add

Tests with mixed menstrual cycle days (day 3, day 21) cannot be combined in the same order. Please order separately. X

Cancellations

The cancellation process is at order level, which means you cannot cancel a test within an order as it will cancel the whole order. If any of the test samples have arrived at the lab or have been processed, this will prevent the whole order from being cancelled.

Retests

Retests can be selected at test level where there are failed biomarkers within a test result.
